

# The Moon

The moon is the earth's (etastilie). It takes 28 (yads) to orbit the earth, this is known as a (ranlu) month. The moon also takes 28 days to rotate on its own (xais) so the same side of the moon is always facing the (rthea).

## Phases of the Moon

Name	Picture
new moon	
crescent	
first quarter	
gibbous	
full moon
